

Kelvin Rein

Ottawa, ON (Can relocate) | +1-778-697-5736 | kelvinrein.ca@outlook.com

[LinkedIn](#) | [GitHub](#) | [Website](#)

Education

Bachelor of Computer Science

Carleton University

Graduated

June 2026

Courses: Data Structures & Algorithms, Database Management, Java OOP, Software Engineering, Programming Paradigms, Web Development

Experience

Software Engineer

BladeX Education - ([Website](#))

Mar 2026 – Present

Remote

- **Contributed to a 3x increase in website traffic** by rebuilding and deploying an education platform with consultant search and booking features. (**React, Tailwind CSS**)
- **Improved platform scalability and data reliability (30%)** by implementing infrastructure to store, retrieve, and cache consultant data across the production application. (**Supabase, PostgreSQL, TanStack Query**)
- Diagnosed and resolved a production routing bug that caused blank-page behaviour after route changes, improving navigation reliability across the platform. (**React Router, Framer Motion**)
- Maintained and deployed production application updates, managing testing, version control, and release workflows to support reliable feature delivery. (**Git, Vercel**)
- Improved frontend performance through image optimization, query caching, deferred analytics, and rendering enhancements, increasing the Lighthouse performance score from **65 to 91**.

Junior Developer

StudySuccess.org

Jan 2025 – Jun 2025

Remote

- **Rebuilt the website saving 10+ hours** to replace the legacy site so the incoming developer could continue feature work without redoing the base. (**JavaScript, HTML/CSS, Node.js**)
- **Improved data quality and reporting reliability (20%)** by standardizing and transforming data from multiple sources for 1000+ students and applicants. (**Python, SQL**)
- **Increased reporting efficiency (33%)** by building ETL workflows and automating reporting processes. (**Python, SQL**)
- Developed Power BI dashboards and collaborated with cross-functional teams to improve data collection processes, increasing reporting accuracy by **25%**.

Data Analyst / Data Scientist Intern

Financial Consumer Agency of Canada

Sep 2023 – May 2024

Ottawa, ON

- **Reduced manual data processing (30%)** by developing Python scripts to automate data cleaning, validation, and transformation for 10,000+ consumer complaint records. (**Python, NumPy**)
- **Ran 20+ experiments and achieved an accuracy of 88%** by deploying and iteratively improving a NLP classification model on Azure Machine Learning. (**Python, NumPy, scikit-learn, PyTorch, Microsoft Foundry**)
- Built ETL and data-processing pipelines using Python and SQL, processing 10+ files, 50+ fields for downstream NLP workflows. (**Python, SQL, SSMS**)
- Presented project progress to the team by walking through the code base and running live demos of data pipelines and the NLP model so they could see how the work operates end to end. (**Python, Azure ML**)
- Created technical documentation for Python workflows, environment setup, model testing, and deployment procedures, and onboarded a new intern to support project continuity and knowledge transfer.

Technical Skills

Skills: Python, JavaScript, SQL, HTML/CSS, React, Node.js, Next.js, Vite, Django, React Router, TanStack Query, Framer Motion, Supabase, PostgreSQL, pandas, NumPy, scikit-learn, Azure ML, Vercel, Git, GitHub, Cursor, Claude, Agentic workflows
